Periscopes

There are two periscopes to make.

To make them, cut out each shape from the sheet. Cut along the SOLID lines.

When you have cut out the shape, fold it along the dotted lines. Sellotape the sides together to form a square tube, so that the printing is on the outside.

There should be four squares of plastic mirror in your kit. You need two for each periscope. The mirrors are protected by a plastic film, so you don't get finger-marks on the mirrors. Raise the edge of the film before you put it on the flaps.

Now fix a square of plastic mirror onto the INSIDE of flaps A and B.

Use the tabs on flaps A and B to sellotape the flaps to the diagonals of the tube.

Remove the film from the mirror and your periscopes are ready to use.

Make a list of situations where people might use a front view periscope.

Make a list of situations where people might use a rear view periscope.
